DIY instructions - rabbit

You need:
• An empty myHumanaPack
• A color printer & paper
• Scissors and craft glue
• If necessary, some cotton for the fluffy tail
• Some cardboard or two measuring spoons
to stabilize the ears
• Optional six pipe cleaners / Chenille wire (white) for the whiskers
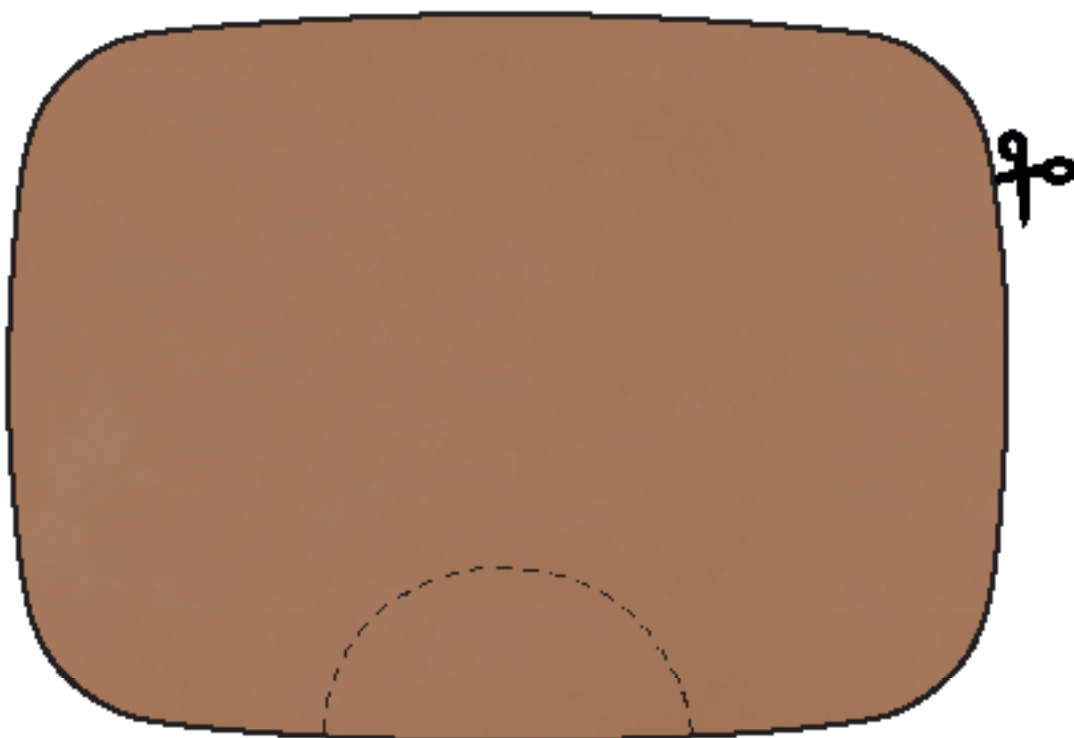

That's how it's done:

1. Download our handicraft instructions, print them out* and cut out the individual pieces.
2. Glue the "Back" form to the center of the back of myHumanaPack.
3. Now fix the "Front" form to the rest myHumanaPack and make sure that the rabbit face is placed in the middle.
4. Now attach the ears to the back of the bunny's face.
Tip: For more stability, you can use some cardboard to cover the ears or two measuring spoons.
5. Now it's time for the final details: With pipe cleaners or Chenille wire becomes the face through whiskers completed. It is best to fix the whiskers with liquid glue.
6. If you like, you can get cotton ball for even more 3D optics. Fasten & glue the cover with cotton on the back of myHumanaPack. AND THE LITTLE RABBIT IS DONE!
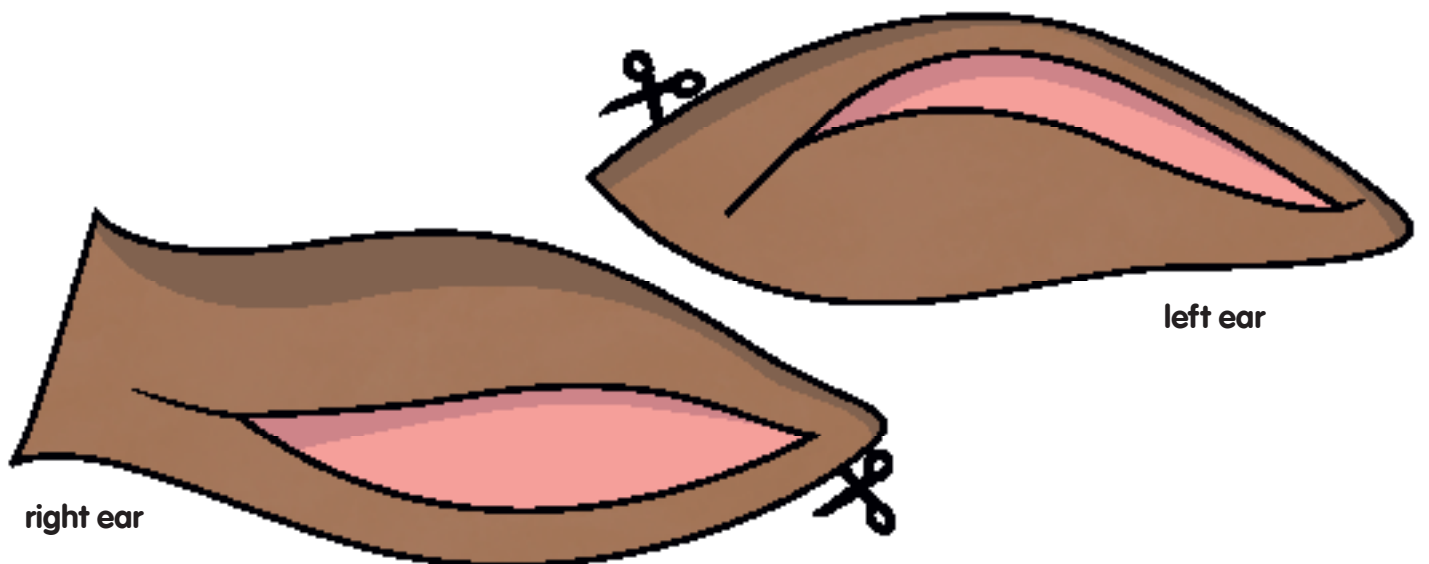

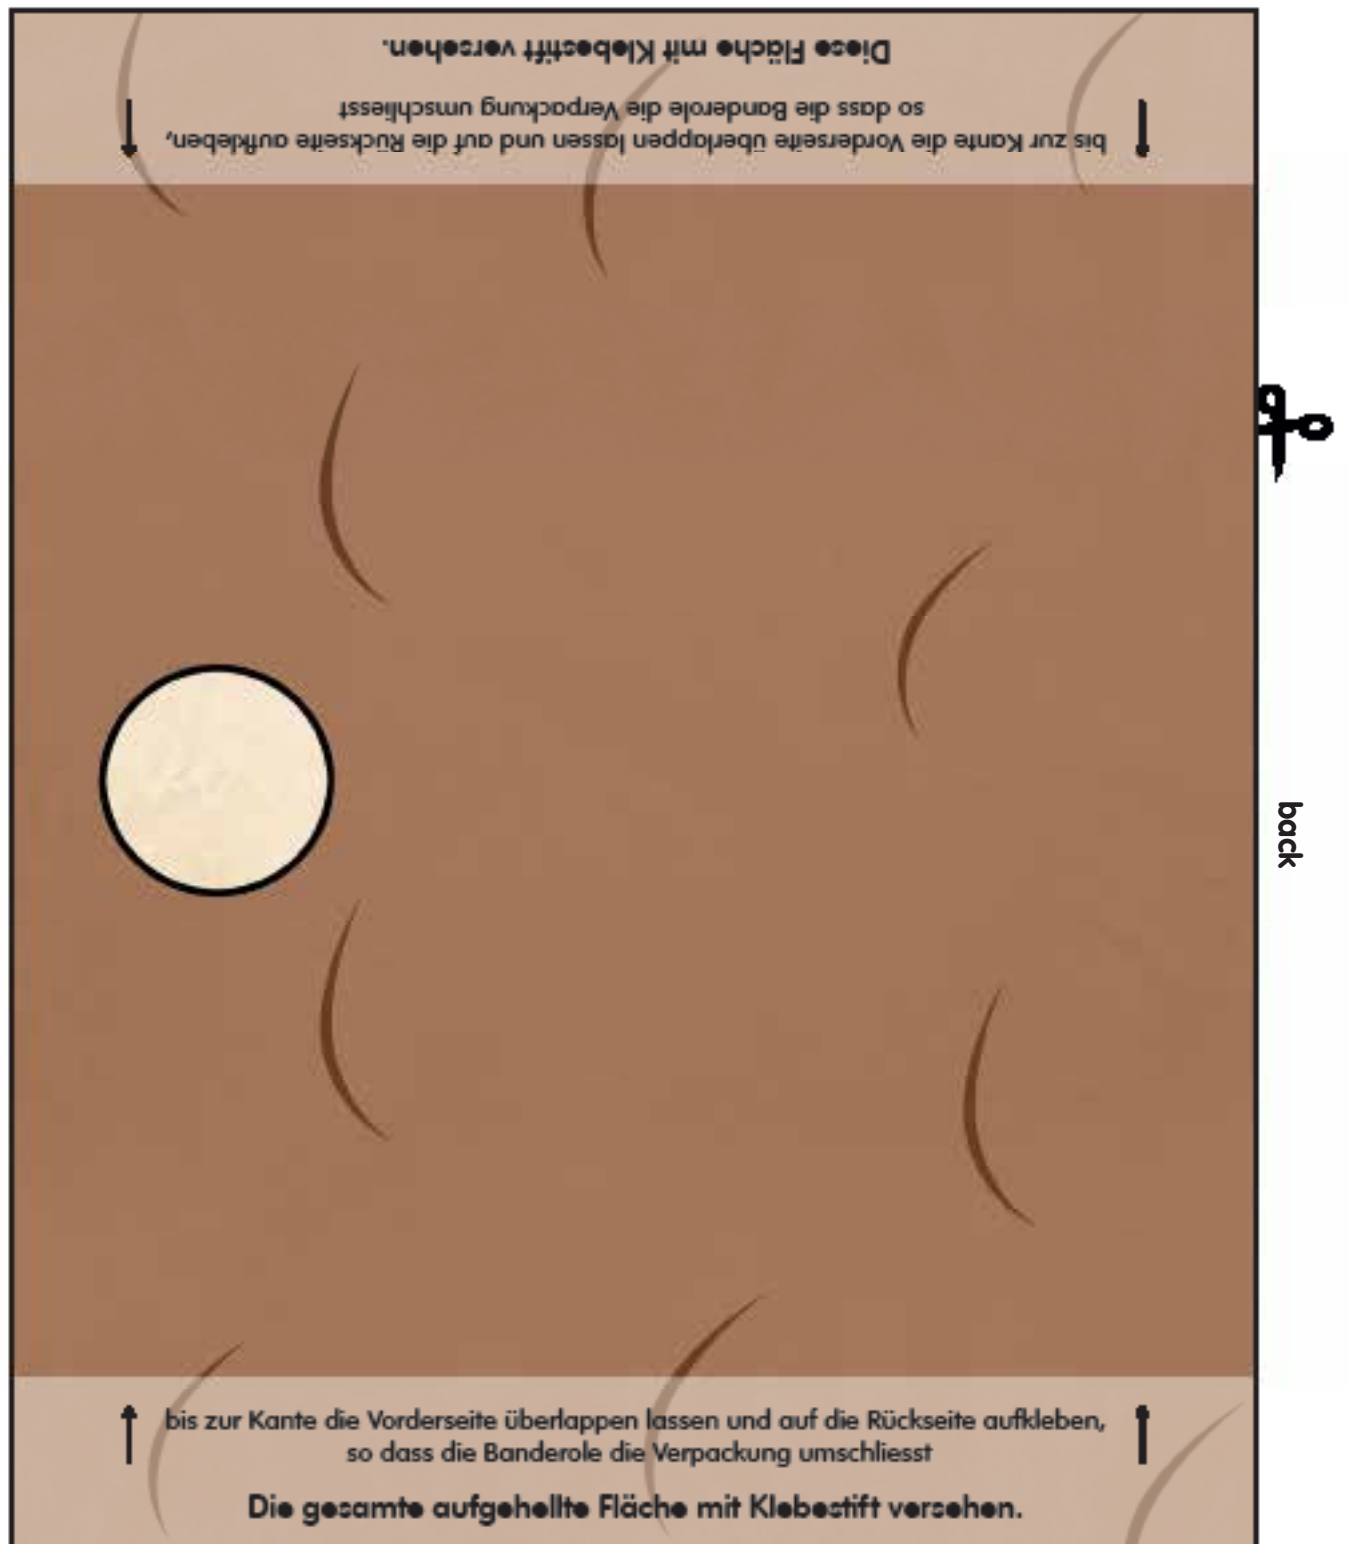

Tip: If you want to use the figure as a can, make sure that the bunny's head and ears do not block or lock the lid.
